

# 3 different designs...

## Step by step instructions

**Step 1:** Give students with the page lines and have them write accordingly. Depending on your students' abilities, you may ask them to draw a picture or write text (or a combination of both).

**Step 2:** Provide students with the camera pieces (base, lens and top) and have them color it in. I used some glitter on the shapes on the camera base and lens, however this is not necessary.

**Step 3:** To assemble the camera, tape or glue the top to the back of the base. Then tape/glue the camera lens onto the front.

**Step 4:** To assemble the pictures: Attach the base (or string) to the back of 3 pictures spaced 1-2cm apart. Ensure to cover the base on the back of the pictures with tape. This ensures that it does not rust too much when completed. Repeat with the remaining 3 pictures.
